

Biodiversity Offsetting

Offset habitat directly impacted by the Project, excluding wetlands and watercourses that are compensated for under other programs

Acquire parcel(s) of land to be protected in perpetuity that appropriately offset the habitat lost from the development of the Goldboro Gold Project

Develop a list of requirements for the land to be acquired (e.g., proximity to GGP diverse habitat, potential to support SAR, connectivity to intact habitat or protected areas)

Engage with Mi'kmaq communities, municipalities and land conservation organizations to identify and secure land

Biodiversity offsetting is currently being developed as a condition of the EA
